GroceryMate

User Test Notes — 3 Users

Prepared by: Tejasvi Maheshwari & Deepak Rawat **Date: 27 October 2026**

1. User Testing Feedback

Three users tested GroceryMate to identify usability issues and suggest improvements. Confirm that the listed feedback and changes match the actual test evidence.

Tester	Issue / Feedback	Change Made	Status
User 1	The webpage took too long to load.	Investigate page-loading performance and optimise where necessary.	Needs verification
User 2	The order status was not visible to users.	Added order status visibility so users can check their order progress.	Implemented
User 3	Finding an item by typing its complete name was inconvenient.	Added auto-suggestions showing matching item names after typing 2–3 letters.	Implemented

2. Summary of Findings

Main issues identified	Slow webpage loading; order status was not visible; finding items by full name was inconvenient.
Improvements implemented	Order status visibility was added, and automatic item-name suggestions were added after typing 2–3 letters.
Further improvement required	Investigate and test webpage loading performance.

3. Conclusion

User testing helped identify usability issues in GroceryMate. Based on the supplied notes, order status visibility and automatic item-name suggestions were implemented to improve the user experience. Webpage loading performance remains an area for further investigation and testing.
